

REVENUE OPERATIONS FOR THE AGENT ERA

Make every market signal count.

Revenue OS connects SignalLoop AI lead discovery and autonomous commercial agents with eCRM lead-to-cash execution, so every action moves with context, policy, and proof.

DISCOVER | ENGAGE | DECIDE | CLOSE | PROVE

THE REVENUE GAP

The problem is not a lack of tools. It is the space between them.

Signals get lost

Buyer intent and conversation context never become durable commercial knowledge.

AI outruns governance

Actions happen without consistent consent, approval, budget, or audit evidence.

Revenue is hard to explain

Activity cannot be traced cleanly to pipeline, orders, and collected cash.

01 | Discover	02 | Engage	03 | Govern	04 | Convert	05 | Prove
Prospect	**Outreach**	**Decision**	**Milestone**	**Outcome**
Waterfall AI enrichment	Voice, email, sequences	Policy & agent slots	Proposal to order	Revenue to cash

THE CONNECTED SYSTEM

From market signal to cash, without losing context or control.

Revenue OS coordinates three focused products through clear ownership and an auditable evidence trail.

ENGAGEMENT & AGENT ENGINE 01

SignalLoop

Discover, enrich, engage, qualify, and schedule across the channels buyers use.

- AI Lead Discovery & Waterfall
- Autonomous Commercial Agents
- Voice, email, and meetings

DECISION AND EVIDENCE 02

Revenue OS

Score, govern, route, and learn from every material action.

- Next-best action
- Approvals and autonomy
- Outcome attribution

COMMERCIAL EXECUTION 03

eCRM

Turn qualified intent into proposals, orders, delivery, and cash.

- Pipeline and proposals
- Orders and production
- Finance and reporting

THE OUTCOME LEDGER

Every handoff carries its proof.

Know who acted, why it was allowed, what changed, and which revenue milestone followed.

CONTEXT	ACTOR	CONTROL	MILESTONE	OUTCOME
Customer and intent	Human, agent, or system	Policy and approval	Proposal, order, delivery	Revenue, cost, and cash

REVENUE LEADERS

Know which motions create durable revenue.

SALES AND OPERATIONS

Act from one shared next step, not scattered queues.

TECHNOLOGY AND RISK

Keep products independent and integration auditable.

Start with one high-value customer journey.

Connect the motion, govern the action, and measure the outcome.

ENTERPRISE PILOT

SignalLoop and eCRM remain independently sellable and deployable.
