

User Guide and Getting Started

Step-by-step instructions for signing in, navigating the app, preparing contacts, creating campaigns, configuring templates and voice agents, monitoring analytics, and using safety controls.

Generated May 11, 2026 from the local EngageHub development app.

Version: May 11, 2026 Audience: EngageHub operators, campaign managers, administrators, and new users

EngageHub is an intelligent outreach platform for planning, launching, and monitoring multi-channel campaigns across email and voice. This guide walks you through the main screens, explains what each feature is for, and gives step-by-step instructions a new user can follow without knowing the product beforehand.

Note: The screenshots in this guide were captured from the local development app at <http://127.0.0.1:5173> . Your environment may use a different URL, theme, sample data, or account name.

Quick Start Checklist

Use this checklist the first time you open EngageHub.

1. Open the EngageHub web app.
2. Create an account or log in with your email and password.
3. Confirm you can see the left navigation menu.
4. Visit the Dashboard to understand the main areas of the product.
5. Create or review templates before launching outreach.
6. Configure voice agents if you plan to use phone calls.
7. Prepare the lead pool from Contacts.
8. Create a campaign draft from Campaigns.
9. Select all contacts, chosen contacts, or a filtered subset from the existing lead pool.
10. Define the offer and channel strategy.
11. Review Analytics and Controls before sending at scale.

1. Accessing EngageHub

Log In

Use the Log In page when you already have an account.

Login screen

Steps:

1. Open the EngageHub URL in your browser.
2. If you are not already signed in, the app shows the Log In page.
3. Enter your email address in the Email field.
4. Enter your password in the Password field.
5. Select the eye icon if you need to briefly reveal or verify the password.
6. Select Log In.
7. After a successful login, EngageHub opens the Dashboard.

Helpful notes:

- Passwords must be at least 8 characters.
- If you mistype your email or password, correct the field and try again.
- The appearance button in the top-right corner changes the visual theme.

Create an Account

Use Sign Up if you do not yet have an EngageHub account.

The image shows a dark-themed web interface for creating an account. On the left, the EngageHub logo is displayed above the heading "Intelligent Outreach, Simplified". Below this, a sub-headline reads "Reach your audience across email and voice channels — with AI-driven personalisation, prebuilt sequences, and real-time analytics in one platform." A list of four features follows, each preceded by a green checkmark: "Multi-channel campaign management", "Voice agents with custom scripts", "Real-time analytics & reporting", and "Reusable email sequence templates". On the right, the "Create an account" section contains four input fields: "Full Name" (with "User" entered), "Email" (with "user@example.com" entered), "Password", and "Confirm Password". Each password field has a toggle icon. A teal "Sign Up" button is positioned below these fields. At the bottom right of the form area, a link reads "Already have an account? [Log in](#)". The footer at the very bottom contains copyright information: "© 2026 EngageHub — Intelligent Outreach Platform" and a list of features: "Multi-channel campaigns · Voice agents · Email sequences".

Multi-channel campaigns · Voice agents · Email sequences

Sign up screen

Steps:

1. From the Log In screen, select Sign up.
2. Enter your full name.
3. Enter your email address.
4. Enter a password with at least 8 characters.
5. Re-enter the same password in Confirm Password.
6. Select Sign Up.
7. After signup, return to the Log In page and sign in.

Good practice:

- Use your work email address so campaigns, audit events, and permissions are tied to your organization.

- If password confirmation fails, retype both password fields carefully.

Recover a Password

Use Password Recovery if you forgot your password.

EH EngageHub

Intelligent Outreach, Simplified

Reach your audience across email and voice channels — with AI-driven personalisation, prebuilt sequences, and real-time analytics in one platform.

- ✓ Multi-channel campaign management
- ✓ Voice agents with custom scripts
- ✓ Real-time analytics & reporting
- ✓ Reusable email sequence templates

Multi-channel campaigns · Voice agents · Email sequences

Password recovery screen

Steps:

1. From the Log In screen, select Forgot your password?.
2. Enter the email address for your EngageHub account.
3. Select Continue.
4. Check your inbox for the password recovery email.
5. Open the reset link in the email.
6. Enter and confirm your new password.
7. Return to Log In and sign in with the new password.

2. Understanding the Main Layout

After logging in, the app uses a consistent layout.

- The left sidebar is the main navigation area.
- The top-left logo returns you to the Dashboard.
- The sidebar can be collapsed with the button in the top header.
- The Appearance control changes between light, dark, and system theme.
- The account menu at the bottom of the sidebar shows the signed-in user.
- The main workspace on the right changes based on the selected feature.

Primary navigation items:

Menu Item	Purpose
Dashboard	High-level overview and quick access to major workflows.
Campaigns	Guided campaign intake, audience selection from the existing Contacts lead pool, filtered subsets, offer-pack assignment, and strategy setup.
Sequences	Build and manage multi-step outreach flows.
Voice Agents	Configure Alex and Morgan voice agents, scripts, test calls, and shared knowledgebase files.
Contacts	Download the CSV template, analyze imports, map fields, preview rows, fix validation issues, import contacts, search the shared lead pool, and view timelines from selected contact links.
Analytics	Review campaign performance, email rates, voice calls, and sequence funnel data.
Templates	Create reusable email templates, preview tokens, publish compliant versions.
Controls	Manage daily sending caps, quiet hours, and emergency pause/resume controls.
Settings	Update profile, password, and account preferences.

Administrators may also see Admin for user management.

3. Dashboard

The Dashboard is your starting point after login.

Dashboard screen

What you can do here:

- Check high-level campaign, email, voice, and open-rate summary cards.
- Open major feature areas using Quick access cards.
- Confirm the sidebar is available and your account is signed in.

Steps:

1. Select Dashboard from the sidebar.
2. Review the top summary cards: Active Campaigns, Emails Sent, Voice Calls, and Avg. Open Rate.
3. Use Quick access cards to jump into Campaigns, Email Sequences, Voice Agents, Analytics, or Templates.
4. Use the sidebar when you need a specific feature directly.

Note: the Dashboard Campaigns card opens campaign intake. Contact import, field mapping, validation, and lead-pool management happen on Contacts.

When to use it:

- At the beginning of the day to orient yourself.
- Before launching new outreach to confirm you are in the right workspace.
- After completing setup to move into monitoring and analytics.

4. Campaign Intake

Campaigns is where you create a draft campaign, choose an audience from the shared Contacts lead pool, and assign the offer/channel strategy.

Campaign intake screen

The Campaign intake workflow has three steps: Campaign basics, Audience selection, and Offer/channel strategy.

Campaigns does not import CSV files or manage leads directly. Prepare and validate contacts on the Contacts page first, then return to Campaigns to select from that existing pool.

Step 1: Campaign Basics

1. Select Campaigns in the sidebar.
2. Enter a campaign name, such as **Q2 Product Outreach**.
3. Use a name that a teammate can understand later.
4. Select Continue.
5. EngageHub creates a draft campaign and moves you to audience selection.

Tips for campaign names:

- Include the audience or objective, such as **Healthcare Renewal Outreach**.
- Include timing when useful, such as **May Webinar Follow-up**.

- Avoid vague names like `Test` or `New Campaign` in shared workspaces.

Step 2: Audience Selection

Campaigns use contacts that already exist in the shared lead pool. If the list is empty or missing people, go to Contacts and import or update the lead pool before continuing.

1. Review the available contact count at the top of Step 2.
2. Search the lead pool if you need to find a specific person, company, email, phone, or timezone.
3. Choose All contacts, Selected contacts, or Filtered subset.
4. For Selected contacts, tick the leads to include.
5. For Filtered subset, enter a subset name and rule.
6. Choose a field such as `company`, `email`, `phone`, or `timezone`.
7. Choose an operator: `equals`, `contains`, `startsWith`, or `in-list`.
8. Enter the value, such as `Technology`.
9. Select Continue.
10. EngageHub assigns the matching contacts to the campaign and moves to strategy setup.

Examples:

Subset Goal	Field	Operator	Value
Target contacts at named companies	<code>company</code>	<code>in-list</code>	<code>Contoso,Fabrikam,Northwind</code>
Target a company family	<code>company</code>	<code>contains</code>	<code>Health</code>
Target local calling windows	<code>timezone</code>	<code>equals</code>	<code>America/New_York</code>
Target known phone contacts	<code>phone</code>	<code>startsWith</code>	<code>+1</code>

Step 3: Offer and Channel Strategy

Strategy controls which offer pack and channel behavior apply to the campaign.

1. Choose a published offer pack version if one is available.
2. If you do not want to assign an offer pack, leave the field blank.
3. Review the Channel strategy JSON.
4. For an email-only campaign, use a simple strategy such as `{"channel":"email"}`.
5. For more advanced scenarios, define the channel structure your team supports.

6. Select Save strategy.
7. Confirm the success message appears.

Important:

- Only published and compliant template or offer-pack versions should be used for live campaigns.
- Ask an administrator or campaign owner before changing a shared strategy.
- Keep JSON valid. Missing quotes, commas, or braces can prevent the strategy from saving.

5. Sequences

Sequences are reusable multi-step outreach flows that combine emails, waits, and voice steps.

The screenshot displays the EngageHub Sequences management interface. On the left is a dark sidebar with navigation links: Dashboard, Campaigns, Sequences (highlighted), Voice Agents, Contacts, Analytics, Templates, Controls, Settings, and Admin. Below these is an 'Appearance' section and a user profile for 'Documentation User'. The main content area has a 'Sequences' header with a '+ New Sequence' button. Below the header, three sequence cards are shown:

- Welcome Onboarding Series** (Active): Nurture new contacts through onboarding with 4 timed touchpoints. 1,220 contacts enrolled. Steps: email (Welcome email), wait (Wait 3 days), email (Getting started tips), wait (Wait 4 days), email (Success story + CTA). Includes an 'Edit' button.
- Product Launch Sequence** (Draft): Build anticipation and convert interest at launch. Steps: email (Teaser announcement), wait (Wait 2 days), email (Feature deep-dive), wait (Wait 5 days), email (Launch day offer). Includes an 'Edit' button.
- Re-engagement Drip** (Paused): Win back contacts who have gone quiet in the last 90 days. 780 contacts enrolled. Steps: email (We miss you), wait (Wait 7 days), email (Exclusive comeback offer), wait (Wait 5 days), voice (Morgan follow-up call). Includes an 'Edit' button.

At the bottom, the footer reads: '© 2026 EngageHub — Intelligent Outreach Platform' and 'Multi-channel campaigns · Voice agents · Email sequences'.

Sequences screen

What you can do here:

- Review existing sequences.
- See whether a sequence is Active, Draft, or Paused.
- Understand each sequence step in order.
- Create a new draft sequence.
- Delete draft or unwanted sequences.

Create a New Sequence

1. Select Sequences in the sidebar.
2. Select New Sequence.
3. Enter a name, such as **Spring Promotion Series**.
4. Enter a short description.
5. Select Create.
6. The new sequence appears as a Draft.
7. Select Edit when you are ready to adjust the sequence details.

Sequence building tips:

- Start with one immediate email.
- Add waits between messages so contacts are not overwhelmed.
- Use a voice step only when a human-like follow-up is appropriate.
- Pause a sequence when content, compliance, or audience quality needs review.

Read a Sequence Card

Each sequence card shows the name, description, status badge, enrollment count when available, ordered steps, and edit/delete actions.

6. Voice Agents

Voice Agents lets you choose, configure, and test AI voice outreach behavior.

Voice agents screen

EngageHub includes two voice agents:

Agent	Best For	Tone
Alex	B2B outreach, appointment confirmations, executive communication	Professional and authoritative
Morgan	Re-engagement, follow-ups, support check-ins, relationship-driven outreach	Empathetic and conversational

Choose an Agent

1. Select Voice Agents in the sidebar.
2. Review the Alex and Morgan cards.
3. Select the agent you want to configure.
4. Use Demo to hear a sample greeting.

5. Select Stop if you want to stop playback.

Configure a Call Script

1. Open the Script tab.
2. Choose a Call Objective: Appointment Reminder, Follow-up Call, Re-engagement, Product Introduction, Feedback / Survey, or Custom.
3. Review the script text.
4. Edit the script to match your campaign.
5. Use personalization tokens such as `{{contact.firstName}}` , `{{company.name}}` , or `{{campaign.topic}}` .
6. Select Preview Test Call to initiate a preview test call flow.

Script writing tips:

- Keep the opening sentence short and clear.
- Mention who the agent represents.
- Ask one question at a time.
- Avoid jargon contacts will not recognize.
- Include a polite fallback if now is not a good time.

Add Shared Knowledgebase Files

Knowledgebase files give Alex and Morgan additional context when contacts ask questions outside the script.

Voice knowledgebase screen

1. Open the Knowledgebase tab.
2. Click the upload area.
3. Choose one or more PDF, DOCX, or TXT files.
4. Review the uploaded file list.
5. Remove any wrong file with the remove icon.
6. Select Save Knowledgebase.
7. Confirm the saved message appears.

Good files to upload:

- Product FAQ.
- Pricing overview.
- Appointment policies.
- Support escalation rules.
- Campaign-specific offer details.

Avoid uploading outdated policies, internal-only confidential notes not approved for agent use, or files with conflicting instructions.

Review Call Settings

The Call Settings tab describes advanced configuration for retry count, call windows, voicemail behavior, consent recording, and Do Not Call integration. These options depend on telephony provider setup.

7. Templates

Templates are reusable outreach messages. They support tokens so the same template can personalize content for each contact.

Templates screen

What you can do here:

- Start from prebuilt starter templates.
- Create custom email drafts.
- Preview token rendering.

- Publish selected templates after guardrail validation.
- Review published templates.

Use a Starter Template

1. Select Templates in the sidebar.
2. Review the Starter Templates section.
3. Choose a template that matches your use case, such as Welcome, Promotional, Re-engagement, Reminder, or Thank You.
4. Select Use Template.
5. The editor fields are prefilled.
6. Review and edit the subject and body.

Create a Template Draft

1. Enter a Template name.
2. Set Channel, usually `email`.
3. Enter the Subject.
4. Enter Body content.
5. Use tokens for personalization, such as `{{contact.firstName}}`, `{{contact.company}}`, `{{offer.expiryDate}}`, and `{{sender.name}}`.
6. Select Save draft.
7. Confirm the feedback message appears.

Writing tips:

- Put the most important message in the first paragraph.
- Use a clear call to action.
- Keep the subject specific and honest.
- Provide default token values where possible.

Preview Tokens

1. In Publish Readiness, choose a template from the dropdown.
2. Select Preview tokens.
3. Review the rendered preview.
4. Check for unresolved tokens.
5. If unresolved tokens appear, edit the template or token configuration.

Publish a Template

1. Select a draft template.
2. Preview tokens first.
3. Select Publish selected.
4. Wait for guardrail validation.
5. Confirm the template appears under Published Templates.

Published templates are the safest versions to use in campaigns. Guardrail-compliant templates reduce the risk of invalid personalization or policy violations.

8. Analytics

Analytics helps you understand performance across campaigns, email sequences, and voice outreach.

Analytics screen

What you can do here:

- Change the reporting period.
- Review summary performance cards.
- Review past campaign runs.

- Compare email and voice performance.
- Inspect the sequence funnel.

Change the Reporting Period

1. Select Analytics in the sidebar.
2. Open the period dropdown in the top-right.
3. Choose Last 7 days, Last 30 days, Last 90 days, or Year to date.
4. Review updated metrics.

Read Summary Cards

The top cards show Total Emails Sent, Average Open Rate, Average Click-through Rate, and Voice Calls Completed. Each card includes a change indicator compared with the previous period.

Review Past Campaign Runs

1. Scroll to Past Campaign Runs.
2. Review campaign name, channel, assigned voice agent, sent count, open rate, click-through rate, date, and status.
3. Look for outliers, such as unusually low open rates or paused campaigns.
4. Use results to decide whether to adjust templates, segmentation, or send timing.

Read the Sequence Funnel

The Email Sequence Funnel shows how many contacts reached each step. Use it to identify drop-off points and decide whether to revise the offer, timing, or final nudge.

9. Outreach Controls

Controls protects your sender reputation and gives administrators emergency stop/start capability.

Controls screen

Set Daily Sending Limits

1. Select Controls in the sidebar.
2. In Daily sending limits, enter Max emails per campaign per day.
3. Enter Max total emails across all campaigns.
4. Select Save limits.
5. Confirm the saved state appears.

Guidance:

- Use conservative limits when warming a sender domain.
- Increase limits gradually as engagement and deliverability remain healthy.
- Use lower campaign-level caps for experimental campaigns.

Set Do Not Disturb Hours

- 1. In Do not disturb hours, choose Stop sending at.
- 2. Choose Resume sending at.
- 3. Select the timezone.
- 4. Select Save quiet hours.
- 5. Confirm the saved state appears.

No emails or calls go out during the configured quiet-hours window.

Pause or Resume All Outreach

Emergency controls stop or restart outreach across every campaign and sequence.

Emergency controls screen

Steps to pause:

1. Scroll to Emergency controls.
2. Enter a reason, such as **Compliance review** or **System maintenance**.
3. Select Pause all outreach.
4. Confirm the paused banner or feedback message appears.
5. Notify campaign owners that sending has stopped.

Steps to resume:

1. Return to Emergency controls.
2. Confirm the reason for the pause has been resolved.
3. Select Resume outreach.
4. Confirm the feedback message appears.
5. Monitor campaigns and analytics after resuming.

Use emergency pause when a compliance issue is being investigated, a template mistake was discovered after launch, provider errors are affecting sending, the wrong contacts or subset were assigned, or your organization needs an immediate temporary hold.

10. Contacts and Timeline

Contacts is the shared lead pool for EngageHub. Add leads here before creating campaigns so the same contacts can be reused across outreach efforts.

Contacts screen

When no contact is selected, the page shows import, mapping, search, and lead list controls.

What you can do here:

- Download the CSV template.
- Analyze a CSV before saving it.

- Map incoming columns to EngageHub fields.
- Preview valid rows.
- Review row-level validation issues.
- Import valid contacts into the shared lead pool.
- Search and refresh the lead table.
- Confirm email, name, company, phone, and timezone values before campaign selection.

Import Leads

1. Select Contacts in the sidebar.
2. Select CSV template if you need the expected columns.
3. Choose a `.csv` file.
4. Select Analyze.
5. Review the analysis summary, including total rows, valid rows, and invalid rows.
6. Map source columns to EngageHub fields such as `email` , `firstName` , `lastName` , `company` , `phone` , and `timezone` .
7. Review the Preview panel for valid rows.
8. Review the Validation panel for row-level issues.
9. Select Import contacts when email is mapped and validation is acceptable.
10. Confirm the feedback message and lead pool table update.

Recommended CSV fields:

Field	Why It Matters
<code>email</code>	Required for email outreach and deduplication.
<code>firstName</code>	Used for personalization tokens.
<code>lastName</code>	Helps sales and support teams identify contacts.
<code>company</code>	Used in templates, scripts, and filtered campaign subsets.
<code>phone</code>	Required for voice outreach.
<code>timezone</code>	Helps schedule sends and calls at appropriate local times.

Search Leads

1. Enter an email, name, company, or phone value in Search leads.
2. Select Refresh or press Enter.
3. Review matching leads in the Lead pool table.
4. Clear or change the search text and refresh again to return to the wider pool.

When a contact is selected, the timeline can show state transitions, emails sent, email opens, call sessions, signals, booking events, and routing events.

View a Contact Timeline

1. Open a contact from a drilldown link when one is available.
2. Confirm the Contact Timeline page opens.
3. Review the total number of recorded events.
4. Use Event type filters to narrow the timeline.
5. Set From and To dates if you only want a specific period.
6. Select an event card to open event details.
7. Review audit metadata, channel, outcome, reason codes, explanations, transcripts, or signal summaries when available.
8. Use Load more if additional events are available.
9. Select Reset to clear filters.

Timeline filter examples:

Goal	Filter
See only calls	Select Call.
Investigate booking behavior	Select Booking.
Audit automation decisions	Select State, Signal, and Routing.
Review recent outreach only	Set a From date for the current week.

11. Settings

Settings lets each user manage their own account.

Settings profile screen

Available tabs: My profile, Password, and Danger zone.

Edit Profile Information

1. Select Settings in the sidebar.
2. Open My profile.
3. Review your full name and email.
4. Select Edit.
5. Update your full name or email.
6. Select Save.
7. Confirm the success message appears.

Use a recognizable full name so audit logs and user lists are easy for teammates to understand. Changing an email may affect future login behavior.

Change Password

The screenshot shows the EngageHub user interface. On the left is a dark sidebar with the EngageHub logo at the top. Below the logo are menu items: Dashboard, Campaigns, Sequences, Voice Agents, Contacts, Analytics, Templates, Controls, Settings (highlighted with a dark background), and Admin. At the bottom of the sidebar is 'Appearance' and a user profile section for 'Documentation User' with an email address. The main content area is titled 'User Settings' with the subtitle 'Manage your account settings and preferences'. It has two tabs: 'My profile' and 'Password' (which is active). Under the 'Password' tab, there is a 'Change Password' section with three input fields: 'Current Password', 'New Password', and 'Confirm Password'. Each field has a password strength indicator icon on the right. Below the fields is a green 'Update Password' button. At the bottom of the main area, there is a footer with copyright information and a list of features: Multi-channel campaigns, Voice agents, and Email sequences.

Settings password screen

1. Select Settings in the sidebar.
2. Open the Password tab.
3. Enter your current password.
4. Enter your new password.
5. Confirm the new password.
6. Select Update Password.
7. Confirm the success message appears.
8. Use the new password next time you log in.

Password rules:

- Password must be at least 8 characters.
- New Password and Confirm Password must match.

Delete Account

The Danger zone tab contains account deletion controls.

1. Select Settings.
2. Open Danger zone.
3. Read the warning carefully.
4. Start the delete confirmation only if you are certain.
5. Confirm account deletion when prompted.

Account deletion is permanent. Do not delete an account that owns active campaigns without first transferring responsibility or confirming with an administrator.

12. Admin User Management

Some users may see an Admin menu item. Admin is available only to superusers.

Admins can typically view users, add users, manage permissions, and review whether a listed user is the current user.

1. Select Admin in the sidebar.
2. Review the users table.
3. Select Add User to create a new account.
4. Enter required user details.
5. Save the user.
6. Confirm the user appears in the table.

If you do not see Admin, your account does not have superuser permissions.

13. Recommended First Campaign Workflow

Follow this end-to-end workflow when launching your first campaign.

1. Prepare templates. Go to Templates, use a starter template or create a draft, preview tokens, and publish the selected template.
2. Prepare voice behavior if calls are included. Go to Voice Agents, select Alex or Morgan, review the script, upload relevant knowledgebase files, and run a preview test call if available.
3. Configure safety controls. Go to Controls, set daily sending limits, and set quiet hours.

4. Prepare contacts. Go to Contacts, download the CSV template if needed, analyze the lead CSV, map email, name, company, phone, and timezone fields, then review preview rows and validation issues before importing the contacts into the shared lead pool.
 5. Create the campaign. Go to Campaigns, enter a clear campaign name, choose all contacts, selected contacts, or a filtered subset from the existing lead pool, and save the channel strategy.
 6. Monitor performance. Go to Analytics and review campaign run metrics, open rate, click-through rate, completed calls, and funnel conversion.
 7. Investigate contacts when needed. Open contact timelines from available drilldown links, filter events, and review reason codes and transcripts where available.
 8. Pause if something looks wrong. Go to Controls, enter a pause reason, and select Pause all outreach.
-

14. Troubleshooting

I cannot log in

1. Confirm you are using the correct email address.
2. Re-enter your password.
3. Use Forgot your password? if needed.
4. Ask an administrator to confirm your account exists.

The Campaign Continue button is disabled

Common causes:

- Step 1 requires a campaign name longer than 2 characters.
- Step 2 requires at least one available contact for All contacts.
- Step 2 requires at least one picked contact for Selected contacts.
- Step 2 requires a filter value for Filtered subset.
- Step 3 requires valid channel strategy text.

If no contacts are available, go to Contacts, import or refresh the lead pool, and then return to Campaigns.

My contact CSV has invalid rows

1. Check required fields like email.

2. Remove blank rows.
3. Confirm column headers are present.
4. Check for invalid email addresses.
5. Analyze the corrected file again from Contacts.

Token preview shows unresolved tokens

1. Confirm the token name is spelled correctly.
2. Confirm the token exists in the sample payload or contact data.
3. Add a default value where supported.
4. Preview again before publishing.

Voice demo does not play

1. Confirm browser audio is not muted.
2. Wait a moment for speech voices to load.
3. Try a different browser if local speech synthesis is unavailable.
4. Select Demo again.

Outreach needs to stop immediately

1. Open Controls.
2. Scroll to Emergency controls.
3. Enter a reason.
4. Select Pause all outreach.
5. Confirm sending is paused.

15. Glossary

Term	Meaning
Campaign	A planned outreach effort for a defined audience and goal.
Sequence	A reusable multi-step outreach flow.
Template	A reusable message body with personalization tokens.
Token	A placeholder like <code>{{contact.firstName}}</code> replaced with real contact data.
Segment	A subset of the audience selected by rules.
Channel strategy	Configuration that defines whether outreach uses email, voice, or another supported channel pattern.
Offer pack	A reusable bundle of approved offer and template assets.
Quiet hours	A time window when EngageHub should not send emails or make calls.
Emergency pause	A control that stops all outreach until resumed.
Contact timeline	A chronological record of events for one contact.
Guardrail validation	A safety check before publishing templates or outreach assets.

16. Print and Share

This guide is available in three forms in this folder:

- `getting-started.md` for editing in Markdown.
- `getting-started.html` for browser viewing and printing.
- `EngageHub-Getting-Started-User-Guide.pdf` for sharing as a printable document.

When printing from the HTML version:

1. Open `getting-started.html` in a browser.
2. Press `Ctrl+P`.
3. Choose Save as PDF or a physical printer.
4. Enable background graphics if your browser offers that option.

5. Print or save.
