Finance and reporting

Not another activity dashboard. An evidence chain from agent action to cash.

Run engagement from one governed command center.

The screenshot displays the SignalLoop Admin Command Center dashboard. On the left is a dark blue sidebar with navigation links: Home, Dashboard (selected), Campaigns, SignalLoop AI, Customer 360, Sequences, Voice Agents, Meetings, Contacts, Lead Preparation, Analytics, Templates, Controls, and Settings. A 'Live SignalLoop command center' badge is at the bottom of the sidebar. The main content area is titled 'Workspace: Campaigns, channels, and accounts'. Below this is the 'SIGNALLOOP · ADMIN COMMAND CENTER' header with filters for 7 days, 30 days (selected), and 90 days, and a 'Refresh' button. The main heading is 'Agent activity, in one operating view', with a subtext: 'Monitor what autonomous agents are doing, where conversations are coming from, and which opportunities need a person or a calendar next.' Below this is a row of six metrics cards: 'ACTIVE CAMPAIGNS' (0, Running now), 'CONTACTS PROCESSED' (0, Last 30 days), 'CHATHUB CONVERSATIONS' (0, No activity recorded), 'LEADS CAPTURED' (0, Across inbound channels), 'MEETINGS BOOKED' (0, 0 need attention), and 'ESCALATIONS' (0, Human follow-up required). The dashboard is divided into two main sections: 'Campaign performance' (Lifecycle coverage for the campaigns your agents are running, 0 total) and 'ChatHub traffic' (Channel mix, containment, leads, and handoffs for the selected range). The 'Campaign performance' section shows three status cards: 'Draft' (0), 'Running' (0), and 'Paused' (0), with a message: 'No campaigns yet. Agents will appear here once a campaign is created.' The 'ChatHub traffic' section shows a message: 'No ChatHub traffic recorded for this period.' At the bottom are three cards: 'Channel health' (Whether inbound channels are configured, active, and ready for agents), 'AI agent operations' (Efficiency signals for autonomous work, separate from sales targets), and 'Calendar handoffs' (Agent-generated scheduling requests and the people responsible for the next step).

Coordinate channels

Campaign, chat, voice, and calendar activity in one operating view.

Separate signal from noise

See intent, handoffs, and escalations, not just volume.

Keep humans in control

Route exceptions and high-impact actions to the right owner.

Know what is ready

Read channel, agent, provider, and scheduling state.

Make voice outreach configurable, reviewable, and readiness-aware.

The screenshot displays the SignalLoop Voice Agents interface. On the left is a dark blue sidebar with navigation links: Outreach, Home, Dashboard, Campaigns, SignalLoop AI, Customer 360, Sequences, Voice Agents (highlighted), Meetings, Contacts, Lead Preparation, Analytics, Templates, Controls, and Settings. The main workspace is titled 'Voice Agents' and includes a 'Refresh' button. Below this is a 'Voice language' section set to 'English'. The core of the interface features three agent cards: Morgan (Neutral North American, Female, Empathetic and conversational), Rajesh (Indian English / Hindi, Male, Warm and confident), and Priya (Indian English / Hindi, Female, Sweet and warm). Each card has 'Use' and 'Preview' buttons. A red warning banner at the bottom states 'Voice readiness needs setup' with a 'Configure' link. The bottom section, 'Voice execution', shows fields for 'Selected provider', 'Callbacks', and 'Selected script'.

Workspace
Campaigns, channels, and accounts

Voice Agents

Choose an AI voice profile, manage real campaign scripts, and check provider readiness for AI calling.

Voice language
Used for browser preview and new script starter text.

English

Morgan (Selected)
Neutral North American
Female
Empathetic and conversational
Best for customer re-engagement, follow-ups, support check-ins, and relationship-led outreach.

Rajesh
Indian English / Hindi
Male
Warm and confident
Best for regional outreach, follow-ups, and appointment calls where Hindi support improves trust.

Priya
Indian English / Hindi
Female
Sweet and warm
Best for Hindi-aware re-engagement, customer check-ins, and relationship-led follow-ups.

Voice readiness needs setup
Configure the missing voice prerequisites in Provider Setup: Public callbacks.

Voice execution
Provider, callback, and manual test-call readiness for the selected script.

Selected provider Callbacks Selected script

Choose the right voice

Language, tone, and use case are explicit.

Control the script

Campaign messaging remains a managed asset.

Prove readiness

Provider, callback, and prerequisite state are visible.

Test before scale

Manual test calls and outcomes support supervised rollout.

Context crosses the boundary. Product ownership stays clean.

Scale agentic revenue work without surrendering policy, identity, or auditability.

The screenshot displays the 'Revenue OS workspace map' interface. It includes a sidebar with navigation options like 'Workspace', 'EngageHub', 'ChatHub', 'Operations', and 'Finance'. The main content area shows the 'ARA Global' workspace with the following details:

- Revenue OS**: One customer record. One operating rhythm. Reach, qualify, close, fulfill, get paid, and improve performance without handing customer context from one disconnected tool to another.
- Your workspaces**: Each workspace owns a clear stage of the revenue lifecycle. High-impact actions remain governed and auditable.
- EngageHub**: Campaigns, multilingual outreach, voice, email, and scheduling. (Capture button)
- ChatHub**: Inbound chat, channels, knowledge, escalation, and inbox coverage. (Capture button)
- Operations**: Order status, delivery exceptions, and customer commitments tied to the deal. (Fulfill & Get Paid button)
- Finance**: Company revenue, margin, collections, receivables, and incentive liability. (Fulfill & Get Paid button)

At the bottom, there are two additional sections:

- Tenant isolation**: Events and records stay in customer scope.
- Independent products**: SignalLoop and eCRM sell separately.

A connected operating rhythm for growth, control, and customer continuity.

REVENUE LEADERSHIP

See what creates revenue

Channel activity

Outcome evidence

Pipeline guesses

Traceable milestones

A clearer view from intent to order to cash.

OPERATIONS AND SALES

Move work with context

Manual re-entry

Event handoff

Scattered queues

Next valid action

Fewer blind spots between engagement and execution.

RISK AND TECHNOLOGY

Govern high-impact action

Opaque automation

Policy evidence

Point integrations

Replayable events

Control that travels with the work.

THE EXECUTIVE QUESTION

Can you trace one agent action all the way to cash?

Start with one segment, one governed motion, and one measurable evidence chain.
