

VISUAL USER GUIDE | REVENUE OS EDITION

# Operate governed engagement with confidence.

A screen-led guide to campaigns, AI agents, voice, messaging, customer context, enterprise controls, and the Revenue OS workspace.

# Start here

1. Open the SignalLoop URL supplied by your administrator.
2. Sign in with your work account. Use **Sign up** or **Forgot your password?** only when those actions are enabled for your deployment.
3. Confirm the workspace in the header and use the left navigation to open the needed area.
4. Start at **Dashboard** for operational status, or **Home** to choose a workspace area.

 SignalLoop

## Intelligent Outreach, Simplified

Reach your audience across email and voice channels — with AI-driven personalisation, prebuilt sequences, and real-time analytics in one platform.

- ✓ Multi-channel campaign management
- ✓ Voice agents with custom scripts
- ✓ Real-time analytics & reporting
- ✓ Reusable email sequence templates

**Forgot your password?** starts email-based recovery without involving an administrator.

## Access and roles

- **Operator or standard user** works with the outreach and Messaging Hub surfaces granted to their workspace.
- **Tenant administrator / superuser** manages tenant people, products, branding, security, messaging, provider setup, and workspace configuration.
- **Platform administrator** manages tenant lifecycle, product policy, identity, support access, and audit from the control plane. Selecting a tenant there never grants access to its business data.

The application hides or redirects restricted screens. If an area is missing, ask a tenant administrator to review your membership and role; do not work around workspace access checks.

## Left-navigation modes

The three controls at the top of the left navigation switch the menu between product areas: **Outreach**, **Messaging**, and, for superusers, **Admin**. The inactive controls may appear as icons until selected; select one to expose its menu. The walkthroughs below follow each mode in left-to-right nav order, the way an operator would click through it.

# Outreach

Switching to Outreach exposes Home, Dashboard, Campaigns, SignalLoop AI, Customer 360, Sequences, Voice Agents, Meetings, Contacts, Lead Preparation, Analytics, Templates, Controls, and Settings.

## Home

**Home** provides product and workflow shortcuts for choosing where to work next.

## Dashboard

**Dashboard** is the operational view for campaign activity, contacts processed, Messaging Hub traffic, leads, meetings, escalations, channel health, agent operations, and calendar handoffs. Use its period selector and **Refresh** when reviewing current activity. Empty-state cards are normal in a new or unconnected workspace; they do not prove that a provider or worker is ready.

## Campaigns

**Campaigns** has campaign work plus **Draft**, **Running**, and **Paused** lifecycle views. Start with a draft, review audience and channel strategy, then monitor its status.

(c) 2026 SignalLoop

Campaigns, voice, email, and account workflows

**SignalLoop AI**

**SignalLoop AI** groups next best actions, a unified work queue, journey signals, and knowledge gaps.

## Customer 360

**Customer 360** is the account workspace for contacts, channel activity, and next action.

## Sequences

**Sequences** is the multi-step outreach surface. Create or select a sequence, inspect its steps, then review enrollments and performance.

## Voice Agents

**Voice Agents** lets you choose a voice profile and language, maintain campaign scripts, inspect provider and callback readiness, and queue a manual test call when the required contact and script are selected. Browser preview validates the selected voice and script experience; it is not proof that a provider completed a live outbound call.

## Meetings

**Meetings** lists contacts that expressed booking interest and supports booking-link or booked-state follow-up.

## Contacts

**Contacts** is the active-workspace lead pool. Download the CSV template when importing; filter and review contacts before using them in campaigns or sequences.

## Lead Preparation

**Lead Preparation** selects contacts, builds lead briefs, and hands prepared contacts to campaigns or sequences.

## Analytics

**Analytics** presents campaign, email, and voice performance; use the correct workspace and time range for decisions. The current **Reporting** route renders an error screen in the verified build — treat it as unavailable until repaired.

## Templates

**Templates** provides starter templates and an editor. Preview tokens and publish only after unresolved tokens and policy issues are addressed.

## Controls

**Controls** is the safety surface. **Pause all outreach** stops outbound activity across campaigns and sequences; record a reason and verify the pause before communicating that sends stopped.

## Settings

**Settings** contains profile and password controls. Role-dependent tabs include opt-outs, workspace setup, and provider setup.

**Provider Setup** is superuser-only and reports API, PostgreSQL, Redis, and worker readiness. Keep provider keys private. Worker cards can be stale or missing in a local build; do not treat the web UI alone as proof that a delivery worker processed a campaign, use the relevant operational health and delivery/audit evidence instead.

## Messaging

Switching to Messaging exposes Messaging Hub Channels, Knowledge Base, Inbox, Analytics, and Settings. Channel and knowledge-base administration requires the appropriate elevated role.

### Channels

An authorized administrator connects a channel here. Live channels require provider credentials, provider IDs, webhook verification, and activation. No demo or empty-state card means that a provider is live — confirm credentials, webhook verification, and activation first.

## Knowledge Base

An administrator adds Website URLs, documents, or FAQ/Q&A entries here, then re-indexes and tests the bot as appropriate.

## Inbox

Operators work conversations here after connected channels receive messages. Use filters and select a thread for its detail.

## Analytics

Review conversations, containment, captured leads, escalations, conversion funnel, and channel outcomes.

**Settings**

Authorized administrators maintain behavior here and review failed messages in **Admin > Dead Letters**.

## Admin

Superusers use Admin for tenant people and roles, products, branding, security, messaging, audit, and dead letters. Standard users will not see this control. Admin is tenant-scoped; it is not a cross-tenant data browser.

### Tenant administration

The landing screen for tenant people and roles, products, branding, security, messaging, and audit.

## People and roles

Manage tenant membership and role assignment.

## Tenant products

Manage which products — CommitArc, RevenueOS, SignalLoop — are entitled to the tenant.

## Tenant security

Manage tenant-level security controls.

## Tenant messaging

Manage tenant messaging configuration; this is separate from Messaging Hub's own Settings tab.

## Tenant audit

Review the tenant audit trail.

## Tenant branding

Manage tenant branding assets and versioning.

## Messaging dead letters

Review Messaging Hub messages that failed delivery.

## CommitArc administration

Tenant-scoped administration for the CommitArc product.

## RevenueOS administration

Tenant-scoped administration for the RevenueOS product.

## SignalLoop administration

Tenant-scoped administration for the SignalLoop product.

## Platform administration

**Platform** is the suite control plane for tenant lifecycle, products, identity, messaging defaults, provider policies, usage and health, support access, and audit. It sits outside the three tenant-scoped nav modes above and is reserved for platform administrators. Selecting a tenant here never grants access to its business data, and support access should be approved, time-bound, revocable, and audited.

### Platform administration

Landing screen for platform-wide administration.

## Platform tenants

Manage tenant lifecycle across the platform.

## Platform identity

Manage platform identity configuration.

## Platform products

Manage product policy across the platform.

## Provider policies

Manage provider policy defaults.

## Support access

Grant and review time-bound, auditable support access to a tenant.

## Messaging defaults

Manage platform-wide messaging defaults.

## Platform audit

Review the platform-wide audit trail.

## Usage and health

Review platform usage and health metrics.

# Revenue OS

**Revenue OS** provides the cross-product operating view for EngageHub, ChatHub, Sales Ops, Operations, Finance, Performance, and Platform administration. Each linked product continues to enforce its own authorization controls.

## Troubleshooting

### Expected workspace or menu is missing

Verify that you signed into the correct work account, then ask a tenant administrator to verify membership and role. A browser-stored workspace selection is never a substitute for server-side access checks.

### A channel, campaign, or dashboard is empty

Check whether the workspace has business data, a connected provider, and running workers. For live delivery, verify provider activation, worker health, and delivery/audit evidence.

### A page shows “Failed to fetch” or an error screen

Refresh once and confirm application health. If it persists, record the route, timestamp, and visible error for support. A browser shell loading is not proof that the screen data loaded.

# Screenshot reference

Playwright captured 48 authenticated, 1440 × 1080 route screenshots in `screenshots/` , each shown once above in its place in the left-navigation walkthrough.

| Area                    | Captures                                                                      |
|-------------------------|-------------------------------------------------------------------------------|
| Public access           | <code>01-login</code> through <code>03-password-recovery</code>               |
| Outreach workspace      | <code>04-home</code> through <code>22-provider-settings</code>                |
| Messaging Hub           | <code>23-messaging-channels</code> through <code>27-messaging-settings</code> |
| Tenant administration   | <code>28-admin</code> through <code>38-admin-signalloop</code>                |
| Platform administration | <code>39-platform</code> through <code>47-platform-usage-health</code>        |
| Revenue OS              | <code>48-revenue-os</code>                                                    |

Dynamic account and conversation-detail routes are not in the set because the verified workspace contained no account or conversation records.
